

## EJERCICIO FQ1BE2798:

a) altura que alcanza ib?:

*Se le alcanza al final, ya que necesitamos las cosas que se solicitan*

b) Aceleración en el plano horizontal:

$$\begin{aligned} \sum F_y &= 0 \\ N_1 - P &= 0 \\ N_1 &= P = \mu \cdot g \end{aligned}$$

$$\begin{aligned} \sum F_x &= m \cdot a_H \\ -f_R &= m \cdot a_H \\ -\mu \cdot N_1 &= m \cdot a_H \\ -\mu \cdot \mu \cdot g &= m \cdot a_H \\ a_H &= -\mu \cdot g = \\ &= -0,15 \cdot 9,8 = \end{aligned}$$

$$a_H = -1,47 \text{ m/s}^2$$

c) Aceleración en plano inclinado:

$$\begin{aligned} \sum F_y &= 0 \\ N_2 - P_y &= 0 \Rightarrow N_2 = P_y \end{aligned}$$

$$\begin{aligned} P_x &= \mu g \sin \alpha \\ P_y &= \mu g \cos \alpha \\ \sum F_x &= m \cdot a_I \\ -f_R - P_x &= m \cdot a_I \\ -\mu \cdot N_2 - \mu g \sin \alpha &= m \cdot a_I \\ -\mu \cdot \mu g \cos \alpha - \mu g \sin \alpha &= m \cdot a_I \\ a_I &= -0,15 \cdot 9,8 \cdot \cos 30 - 9,8 \cdot \sin 30 \end{aligned}$$

$$a_I = -1,27 - 4,9 \Rightarrow a_I = -6,17 \text{ m/s}^2$$

$$d) \underline{V_B = ?}$$

$$W_{nc} = \Delta E$$

$$W_{FR} = E_B - E_A$$

$$\begin{aligned} FR \cdot d \cdot \cos 180 &= (E_c + E_p)_B - (E_c + E_p)_A \\ -\mu \cdot N_1 \cdot 10 &= \frac{1}{2} m V_B^2 - \frac{1}{2} m V_A^2 \\ -\mu \cdot m \cdot g \cdot 10 &= \frac{1}{2} m V_B^2 - \frac{1}{2} m \cdot 20^2 \\ -0.15 \cdot 9.8 \cdot 10 &= \frac{1}{2} V_B^2 - 200 \\ -14.7 &= \frac{1}{2} V_B^2 - 200 \Rightarrow -14.7 + 200 = \frac{1}{2} V_B^2 \\ 2 \cdot 185.3 &= V_B^2 \end{aligned}$$

$$V_B = \sqrt{370.6} = 19.25 \text{ m/s}$$

$$e) \underline{\text{Trabajo Total de } FR:}$$

$$W_{FR_1} = FR_1 \cdot d_1 \cdot \cos 180 = -\mu \cdot N_1 \cdot d_1$$

$$W_{FR_2} = FR_2 \cdot d_2 \cdot \cos 180 = -\mu \cdot N_2 \cdot d_2$$

$$W_{FR_1} = -0.15 \cdot m \cdot g \cdot 10 = -0.15 \cdot 12 \cdot 9.8 \cdot 10$$

$$W_{FR_1} = -176.4 \text{ J}$$

$W_{FR_2} \Rightarrow$  Pendiente de calcular el espacio ( $d_2$ ) que recorre en el plano inclinado:

$$\begin{aligned} d_2? \Rightarrow V_0 &= 19.25 \text{ m/s} \\ a &= -6.17 \text{ m/s}^2 \\ V &= 0 \end{aligned}$$

$$MRUA \Rightarrow V = V_0 + at \Rightarrow 0 = 19.25 - 6.17t$$

$$t = \frac{19.25}{6.17} = 3.12 \text{ s}$$

$$S = v_0 t + \frac{1}{2} a t^2$$

$$S = 19,25 \cdot 3,12 + \frac{1}{2} (-6,17) \cdot 3,12^2$$

$$S = d_2 = 30,03 \text{ m.}$$

$$W_{FR_2} = -\mu \cdot m \cdot g \cdot \cos \alpha \cdot d_2$$

$$= -0,15 \cdot 12 \cdot 9,8 \cdot \cos 30 \cdot 30,03$$

$$W_{FR_2} = -458,76 \text{ J}$$

$$W_{TOTAL} = W_{FR_1} + W_{FR_2} = -176,4 - 458,76$$

$$W_{TOTAL} = -635,16 \text{ J}$$

a) Altura que alcanza

$$h? \Rightarrow \text{sen } 30 = \frac{h}{30,03}$$

$$h = 30,03 \cdot \text{sen } 30$$

$$h = 15,02 \text{ m}$$
